

Homework

CSC 28 – Discrete Structures for Computer Science

This work is not turned in but should be done before any quiz on it. To maximize your quiz performance: attend lectures, do readings, start homework early, ask for help when you need it, review problems and solutions before the quiz. If anything in this assignment does not make sense, please ask for help.

Reading) *Book of Proof*, Chapters 4–6 and the first two sections of both Chapters 9 and 10, linked from the course webpage (about 50 pages). Familiarize yourself with any other module resources on the course webpage and read them as needed.

Problems) Do Exercises 1, 5 and 9 from the end of each chapter. Do more Exercises similar to these if you want more practice. I will use a combination of problems that look like these and/or ones found in the study guide.

Solutions

The solutions to the odd Exercises are at the end of the textbook. After working through Exercises, check your answers in the solutions. If you don't understand a solution, ask me in class or office hours, ask a tutor, or ask on Piazza. Start early so you have time to get help.
